

GTAG11 Round Air-Guard

SKU:

GTAG11 Air-Guard is a circular brush and gasket sealing cable grommet and fits a 127mm diameter cut out. The units double layered bristle and gasket seals combine to form a tight air barrier around cables passed through the outlet. This air-flow management tool eliminates by-pass air, significantly improves cooling efficiency and helps reduce running costs

Product Description

GTAG11 Air-Guard

Sealing cable openings in a raised access floor is the simplest and most cost-effective solution to improving cooling efficiency in an under-floor cooled Data Centre.

The GTAG11 is designed to fit the most common raised access floor cut out of 127mm diameter. The 2 part grommet envelopes and protects cables passing through the raised floor.

The GTAG11, like all Air-Guard products, is made from V0 flame retardant materials. Although V0 materials are more costly to manufacture we believe that safety and quality are standards not open to compromise. The GTAG11 is competitively priced, well engineered and a safe grommet solution designed to meet the exacting standards of the Data Centre specifier.

The GTAG11 circular cable opening is wide enough to allow both a 16amp and/or 32amp commando socket to pass through the grommet opening. The bristles and gasket close around the cables to form a tight flexible seal. This eliminates by-pass air, improves the operational efficiency of the data centre, reduces running costs and improves cooling performance.

Dimensions

- Overall Diameter – 165mm
- Cut Out Diameter – 127mm
- Max Cable Area – 100mm diameter
- Overall Depth – 40mm

Air-Guard,® , the cool choice

Size: 127mm diameter cut out **Color:** Black

Weight: 225g
